

Job Description

Will you join our team and create innovative software to improve road safety and reduce traffic jams? We develop apps, cloud based software and data services for governments and businesses such as insurance companies and car leasing companies. Our Software Engineering department is responsible for the creation of new applications using the latest techniques. Join our team and help us with preventing accidents and reducing traffic jams.

As a System Architect you'll translate the clients' wishes and ideas into specific requirements and a high level software design, which will be elaborated and implemented by your colleagues. You like solving complex issues and creating thorough designs for your solutions. Together with the Manager Software Engineering, you'll manage a team of Software Engineers. Not only do you possess good technical skills, but you are also able to fully unlock the potential of other people.

Required skills and expertise

- College or university education in ICT (engineering and/or design)
- At least two years of experience in software development projects and scrum
- Extensive experience in C++, JAVA, QT Software, SQL and PHP programming
- Extensive experience in object oriented design techniques (UML or SysML)
- Good communication and coaching skills
- Above average analytical skills
- Good in planning and organising
- Good command of the Dutch and/or English language

What do we offer?

- A good compensation and benefits package, based upon your experience and competences
- A 50% contribution to your pension plan
- A total of 35 days of vacation time, gives you time to explore the world!
- With our continuous training and developmental opportunities, you can advance your career as far as your ambition allows.
- Flexi-working and a MacBook, so you can sometimes work at home
- A lot of room for creativity, we are curious about your ideas
- A foosball game, to challenge your colleagues from time to time

About us

Expert in traffic management and smart mobility

There's a big chance you've never heard of us yet. Although without knowing you've probably come across TrafficLink products quite often. All Hard Shoulder Running lanes in the Netherlands are controlled with our application. We introduced the first integrated traffic management software in The Netherlands twenty years ago. We never stopped innovating in traffic management and smart mobility

ever since. Nowadays we supply businesses and governments with smart solutions, such as traffic management software in the cloud and smartphone apps which help road users to drive safely.
